Q: Is there any way to give docx button icons in oracle 11G I have created a button in my doc and we need that icon to be a button. I have read somewhere they used the function SAVE_AS for that purpose. but I don't have idea what is that function. A: I had the same requirement. When I looked for a reference, I found out that there's no way to do so. By reading the manual, I learned that you can only change the font or color of that button. There's no way to change its appearance. However, there is a way to change it's appearance. You can use OLE FONTS. Your input file could be of any format (.docx,.dot,.odt,...), and you can use an OLE FONT to change the appearance of your button. You can either make an OLE FONT with your own picture (or use some free images from the internet) or use one of the commonly used fonts in the docx specification. It's really easy. Just go to Tools > Options > OpenOffice Writer > Document Properties > Document Font and change the font from there. Hope this helps.
